

Gravity Force Generator by Bobby Amarasingam

Several years ago I was Russian representative of great inventor. His name Mr. Bobby Amarasingam, UK. We tried to get interest of Russian investors but failed.

In this publication of 2019 I have an idea to disclosure my understanding of this technology. It is not original author's ideas but just my own understanding but you can see how it works. I hope it will raise interest to this project and we'll find investors.

In 2010 the device was demonstrated as 12 kW power electric generator, you can see a lot of video in YouTube (search for Bobby Amarasingam generator).

It is free energy device, i.e. it can operate without fuel or external electric power source. The main part of this device is metal rotor (or two rotors) with eccentrics.

Trajectory of eccentrics in vertical plane is cardioid, due to this trajectory of mass here is disbalance of gravity central point of the rotor. In other words, the rotor in motion is disbalanced wheel and gravity force produce additional torque for it. Analogy is famous Thomson inertial drive but here is vertical plane of rotor instead of horizontal plane rotor.

Initial rotation is provided by small electromotor. During start stage input is about 500 w but in operational mode the input power is about 50 w, with output power about 12 kW. Extra output power is result of gravity force. It is free of charge!

Contact me to develop commercial aspects of this technology. We can design fuel less generators of any power level.
