

Time Machine experimental research

Alexander SL

www.faraday.ru

Starting

- Nikolay Kozyrev

Russian author of theory about
“active properties of time”

Experimentally proved possibility
of waves of “density of time”. Methods are any
entropy or anti-entropy processes (melting or
crystallization...)

Aether

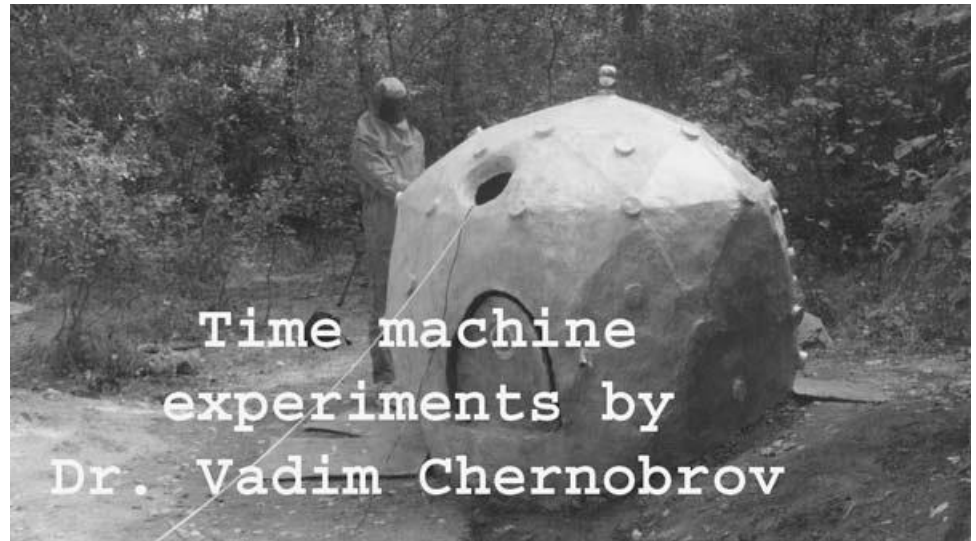

- Albert Veinik

Professor, Academician
His theory describe physical
property and methods
of changing of the time.
Academician Veinik also
developed new type of
propulsion by means of
“chronal gradient”.

Experiments

Dr. Vadim Chernobrov made several experiments on change of time rate by means of “converging EM-waves”

Patent applied # 2002110067

April 9, 2003

- Alexander V. Frolov offered new understanding of link between rate of time and density of aether.
- Matter objects (particles) exist in space-time as aether vortex processes.
- Changes of “velocity of existence of matter” in aether is possible by means of compression or decompression of aether.

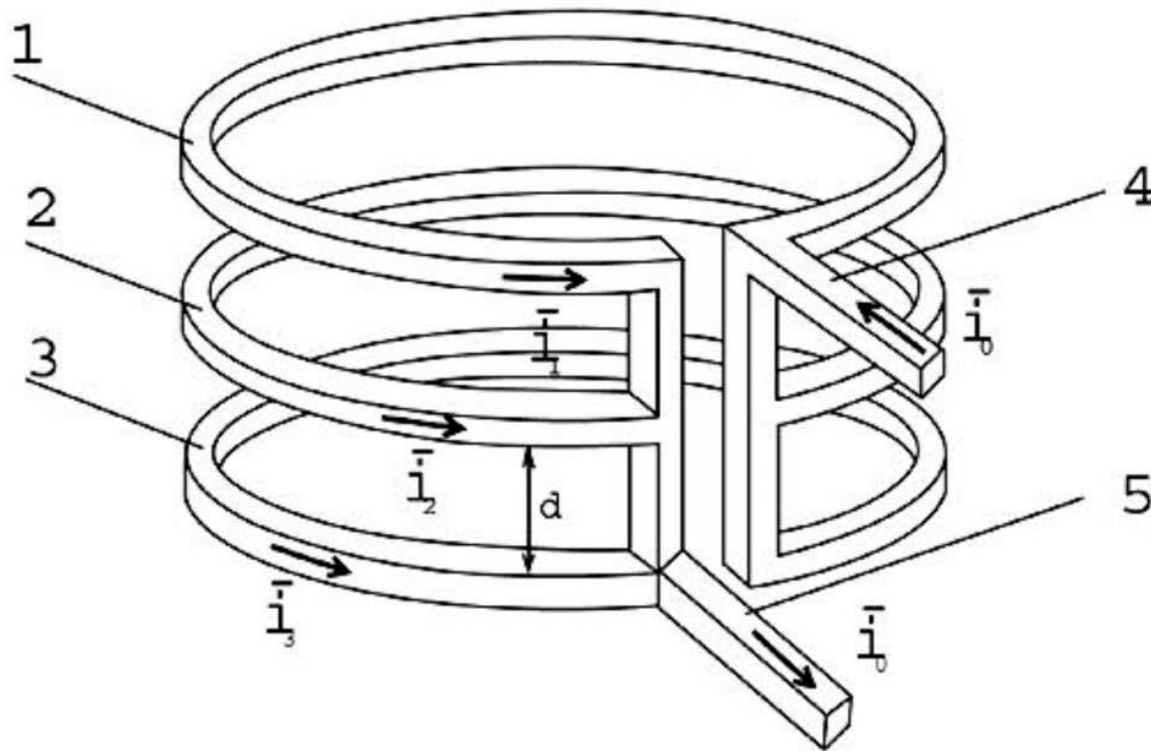

2003 experiments

2003 experiments were organized by Alexander V. Frolov in collaboration with Dr. Chernobrov. Device was made and tested by Alexander V. Frolov

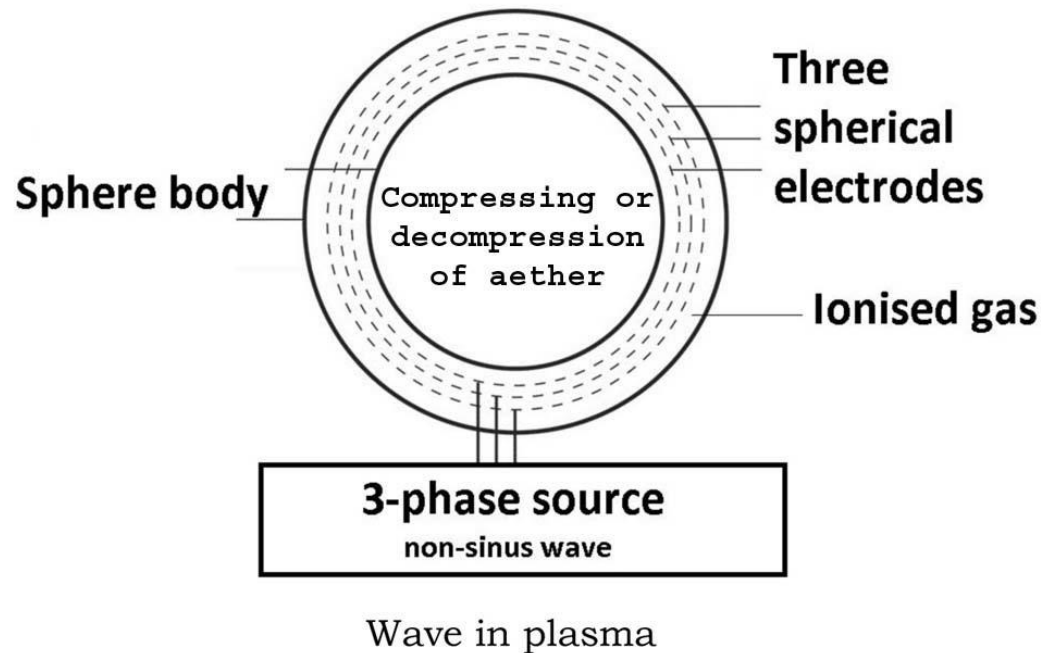

How it works

- Special coil with three elements

Development of design

- Three layer sphere to get effect of aether compression or decompression

Time Machine congress

- Moscow, April 12, 2003

Alexander V. Frolov

Dr. Vadim A. Chernobrov

Contacts

- Are you interested to repeat our experiments?
